Enterprise Reporting Solution

Multi-store businesses require special tools and resources to manage a complex communication and information network. Central Manager offers these management tools to larger chains in the same direct, user-friendly format that is the basis for the Restaurant Manager™ POS system.

Providing Solutions to Real Business Problems

Restaurant Manager focuses on critical business issues facing today's restaurant owner. With Restaurant Manager you get robust functionality, fully integrated optional modules and the expertise needed to solve real business issues and meet your unique goals.

Business Need/Goal	How Central Manager Helps
Control over multiple locations	Multi-unit polling for sales and labor costs.
Ability to easily make changes and access data	Centralized uploading of menu and payroll changes, and overall data management with reporting.
Access to other important information	Integrated general ledger and back office capabilities.

Comprehensive Multi-Store Polling

The Central Manager solution has been designed with ease-of-use and reliability in mind. The overall look and feel of the software replicates the Backoffice module in each Restaurant Manager site license. The system includes multiple automated processes that aim to guarantee successful completion of the overnight polling process. Detailed information on the polling process is available on-screen at the end of each polling session.

The system also allows polling to take place regardless of whether an individual store is open and operating or not. In the rare case when there has been an overnight communication error, a manager can instantly poll the affected stores based on the on-screen polling report.

Manage Your Growing Business

Central Manager is a must-have for effective multi-store management and reliable polling.
